## COMPANY PROFILE

### JIANGSU CEV VEHICLE CO.,LTD

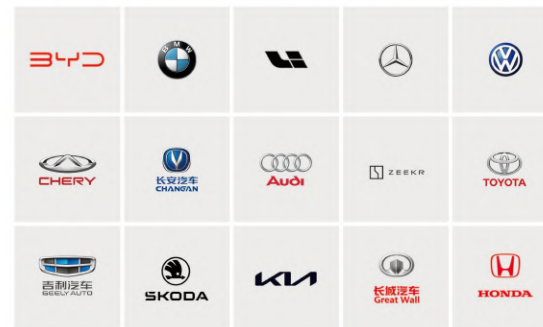

Welcome to Jiangsu CEV Vehicle Co., Ltd, where we are dedicated to being a responsible and reliable business partner in the automotive industry. At CEV, integrity is our guiding principle, and we are committed to doing the right thing every step of the way. Transparency, ethical conduct, and accountability are the cornerstones of our operations. Navigating the process of buying cars from China can often seem overwhelming, but with CEV, it doesn't have to be. Our team of seasoned experts is here to streamline your experience, ensuring a hassle-free and efficient journey from start to finish.

Our team has exported over 5,000 vehicles to countries around the world and possesses deep insights into the auto industry. We leverage this expertise to provide our customers with valuable guidance and assistance, empowering them to make informed decisions that align with their needs and preferences.

In addition to our wide selection of vehicles, we also offer flexible auto financing options to make purchasing your dream car easier and more accessible.

At Jiangsu CEV Vehicle Co., Ltd, we believe in building strong and enduring partnerships with our customers. We are committed to providing exceptional service and support throughout your car-buying journey, ensuring your satisfaction and peace of mind every step of the way.

Welcome to CEV, your perfect destination for all car trades in China.

# THE HISTORY OF THE ELECTRIC CAR

Introduced more than 100 years ago, electric cars are seeing a rise in popularity today for many of the same reasons they were first popular.

Whether it's a hybrid, plug-in hybrid or all-electric, the demand for electric drive vehicles will continue to climb as prices drop and consumers look for ways to save money at the pump. Currently more than 3 percent of new vehicle sales, electric vehicle sales could grow to nearly 7 percent -- or 6.6 million per year -- worldwide by 2020, according to a report by Navigant Research. With this growing interest in electric vehicles, we are taking a look at where this technology has been and where it's going. Travel back in time with us as we explore the history of the electric car.

## 1828-1835

### First Small-scale Electric Cars

Horse and buggies are the primary mode of transportation, but innovators in Hungary, the Netherlands and the U.S. think to the future, creating some of the first small-scale electric cars.

## 1832

### First Crude Electric Vehicle Is Developed

Around 1832, Robert Anderson develops the first crude electric vehicle, but it isn't until the 1870s or later that electric cars become practical. Pictured here is an electric vehicle built by an English inventor in 1884.

## 1889-1991

### First Electric Vehicle Debuts in U.S.

William Morrison, from Des Moines, Iowa, creates the first successful electric vehicle in the U.S. His car is little more than an electrified wagon, but it sparks an interest in electric vehicles. This 1896 advertisement shows how many early electric vehicles were not much different than carriages.

## 1899

### Electric Cars Gain Popularity

Compared to the gas- and steam-powered automobiles at the time, electric cars are quiet, easy to drive and didn't emit smelly pollutants -- quickly becoming popular with urban residents, especially women.

## 1901

### Edison Takes on Electric Vehicle Batteries

Many innovators take note of the electric car's high demand, exploring ways to improve the technology. For example, Thomas Edison thought electric vehicles were the superior mode of transportation and worked to build a better battery.

## 1901

### World's First Hybrid Electric Car Is Invented

Ferdinand Porsche, founder of the sports car by the same name, creates the Lohner-Porsche Mixte -- the world's first hybrid electric car. The vehicle is powered by electricity stored in a battery and a gas engine.

## 1900-1912

### Electric Cars Reach Their Heyday

By the turn of the century, electric vehicles are all the rage in the U.S., accounting for around a third of all vehicles on the road. Pictured here is Fifth Avenue in New York City around this time, showing the range in vehicle options available.

## 1908-1912

### Model T Deals a Blow to Electric Vehicles

The mass-produced Model T makes gas-powered cars widely available and affordable. In 1912, the electric starter is introduced, helping to increase gas-powered vehicle sales even more. Pictured here is Henry Ford with the first Model T and the 1 millionth.

## 1920-1925

### Decline in Electric Vehicles

Better roads and discovery of cheap Texas crude oil help contribute to the decline in electric vehicles. By 1935, they have all but disappeared. Pictured here is one of the gasoline filling stations that popped up across the U.S., making gas readily available for rural Americans and leading to the rise in popularity of gas-powered vehicles.

## 1968-1973

### Gas Prices Soar

Over the next 30 years or so, cheap abundant gasoline and continued improvement in the internal combustion engine created little need for alternative fuel vehicles. But in the 1960s and 1970s, gas prices soar through the roof, creating interest in electric vehicles again.

## 1971

### Over the Moon with Electric Vehicles

Around this same time, the first manned vehicle drives on the moon. NASA's Lunar rover runs on electricity, helping to raise the profile of electric vehicles.

1973

### The Next Generation of Electric Vehicles

Many big and small automakers begin exploring options for alternative fuel vehicles. For example, General Motors develops a prototype for an urban electric car, which the company displays at the First Symposium on Low Pollution Power Systems Development in 1973.

1974-1977

### Leader in Electric Vehicle Sales

One successful electric car at this time is Sebring-Vanguard's CitiCar. The company produces more than 2,000 CitiCars—a wedge-shaped compact car that had a range of 50-60 miles. Its popularity makes Sebring-Vanguard the sixth largest U.S. automaker by 1975.

1979

### Interest in Electric Cars Fades

Compared to gas-powered cars, electric vehicles at this time have drawbacks, including limited performance and range, causing interest in electric cars to fade again.

1990-1992

### New Regulations Renew Electric Vehicle Interest

New federal and state regulations create a renewed interest in electric vehicles. The result: Auto-makers begin modifying popular vehicle models into electric vehicles, enabling them to achieve speeds and performance much closer to gasoline-powered vehicles.

1996

### EV1 Gains a Cult Following

GM releases the EV1, an electric vehicle that was designed and developed from the ground up. The EV1 quickly gains a cult following.

1997

### First Mass-Produced Hybrid

Toyota introduces the first mass-produced hybrid, the Prius. In 2000, Toyota releases the Prius worldwide, and it becomes an instant success with celebrities, increasing its (and the electric vehicle's) profile.

1999

### Building a Better Electric Car

Behind the scenes, scientists and engineers work to improve electric vehicles and their batteries. Pictured here is a researcher at the Energy Department's National Renewable Energy Lab testing electric vehicle batteries.

2006

### Silicon Valley Startup Takes on Electric Cars

Tesla Motors, a Silicon Valley startup, announces it will produce a luxury electric sports car with a range of 200+ miles. Other automakers take note, accelerating work on their own electric vehicles.

2006-2013

### Developing a Nation-Wide Charging Infrastructure

To help consumers charge their vehicles on the go, the Energy Department invests in a nation-wide charging infrastructure, installing 1,800 residential, commercial and public chargers. Including chargers installed by automakers and other private companies, today there are 8,000 public charging locations in the U.S.

2010

### First Commercially Available Plug-In Hybrid for Sale

GM releases the Chevy Volt, making it the first commercially available plug-in hybrid. The Volt uses battery technology developed by the Energy Department.

2010

### Nissan Launches the LEAF

In December 2010, Nissan releases the LEAF, an all-electric zero tailpipe emissions car. In January 2013, Nissan begins assembling the LEAF in Tennessee for the North American market thanks to a loan from the Energy Department.

2013

### Electric Vehicle Drop Battery Costs

The battery is the most expensive part in an electric vehicle. Thanks to investments by the Energy Department, battery costs drop by 50 percent in just four years, helping make electric vehicles more affordable for consumers.

2014

### Electric Vehicles and a Multitude of Choices

Consumers now have a multitude of choices when buying an electric vehicle, including hybrids, plug-in hybrids and all-electric. Today, there are currently 23 plug-in electric vehicle and 36 hybrid models available.

2015

### The Future of Electric Cars

Electric vehicles hold a lot of potential for helping the U.S. create a more sustainable future. If the U.S. transitioned all the light-duty vehicles to hybrids or plug-in electric vehicles, we could reduce our dependence on foreign oil by 30-60 percent, while lowering the carbon pollution from the transportation sector by as much as 20 percent.

## THE FUTURE OF ELECTRIC CARS

It's hard to tell where the future will take electric vehicles, but it's clear they hold a lot of potential for creating a more sustainable future.

# ELECTRIC VEHICLES IN CHINA

2003-2005: China's national medium and long-term scientific and technological development plan established the strategy of energy conservation and new energy vehicles; From 2009 to 2012, the Ministry of Science and Technology and the Ministry of Industry and Information Technology established the "pure electric drive" technology transformation strategy in their development plan;

2003-2005

2009-2012

Meanwhile, during the 2008 Beijing Olympic Games, pure electric buses produced by China Jinghua Bus Factory which used electric charging stations, were put into operation on a certain scale. In 2010, BYD e6, a pure electric vehicle, was put into taxi operation in Shenzhen. After 2012, Beijing also began to put Beiqi ev1 50, Beiqi Foton, Changan ev, etc. into taxi operation in the outer suburbs of the city. In Shanghai, since 2014, new energy vehicles represented by Roewe plug-in hybrid have been put into the operation of online car hailing and taxi.

After 2015, encouraged by Tesla and assisted by capital, Nextev, Weimar, Xiaopeng and other local emerging new energy vehicle brands in China were born. Traditional local manufacturers such as BAIC, BYD, Geely and Chery also expanded their product lines and expanded the layout of new energy vehicles.

## ELECTRIC VEHICLE MARKET SIZE

In total, more than 10.2 million electric vehicles were sold in 2022, with BYD, Tesla and Volkswagen Group among the top three, according to market research institute data. It is reported that China, Germany and the United States have become the world's new three major electric vehicle markets. In 2022, global new-energy vehicle sales reached 10.824 million units, up 61.6 percent year on year. The EVTank analysis points out that the major contribution to global car sales comes from China. In 2022, China's new-energy vehicle sales reached 6.884 million units, accounting for 63.6 percent of the world's total, while the figure was only 3.0 percent in 2021.

It is worth noting that although the market scale of electric vehicles is expanding rapidly, the proportion of electric vehicles in the overall automobile market is still relatively small. According to data from the International Energy Agency (IEA), the global car sales in 2022 reached 81.05 million, of which 10.824 million were electric cars, accounting for only 13.3%. However, with the improvement of environmental awareness, policy support and other factors, the electric vehicle market is gradually becoming the mainstream trend of the automobile industry, and the market size is expected to continue to expand in the future.
